## SKILLS

---

- **Languages** Go, Python, Java, Typescript, React
- **Backend & Distributed Systems** Microservices, Event-Driven Architecture, REST APIs, Concurrency, Streaming APIs, WebRTC, Websocket, Design Review, CI/CD, low-latency systems, Docker
- **Agent Systems & AI Engineering** LLM Integration, MCP, AI Deployment, AI-Assisted Development, Codebase refactoring, performance optimization
- **Data, Cloud & Infrastructure** Kafka, PostgreSQL, TimescaleDB, Redis, Kubernetes, AWS, Data Pipelines, Temporal

## EXPERIENCE

---

- **CoinSwitch** Bengaluru, India  
Senior Software Engineer **Nov 2025 - Present**
  - **Delegated Access-Based Trading:** Developed a low-latency, **role-based access** system via a unified service, enabling **1M+ active users** to securely grant delegated access to their trading accounts; extended the framework to support authorized access control across **10+** product lines and features.
  - **Reliability, Performance & Application Ownership:** Re-architected high-volume trading services for scalability, reducing P95 latency from **380ms to 30ms** for orders flow; modularized core services, expanded automated test coverage, and owned reliability/incident response, cutting MTTR by **60%**.
  - **Real-Time Pricing Pipeline:** Re-architected the organization-wide **INR/USDT** conversion from a hardcoded rate to a dynamic, subaccount-scoped pricing model, enabling backward-compatible rate transitions and pricing isolation for active positions across a **20M+** users trading platform
  - **Time-Series Data Migration & Optimization:** Migrated high-volume **market trade data** to TimescaleDB, optimizing data access and query patterns to improve scalability and reduce query latency by **40%**.
  - **Observability, AI-Native Development & Debugging:** Shipped **MCP-based AI agents** for on-call/operational workflows; overhauled logging/metrics/alerting for reliability, cutting observability costs from **\$150K to \$10K**.
- **Pixis.ai** Bangalore, India  
Senior Software Engineer **Oct 2024 - Oct 2025**
  - **Optimized Core Services Performance:** Reduced memory footprint by **35%** and **P95 latency** by **70%** across critical backend services by eliminating storage inefficiencies, refactoring data models, improved telemetry for debugging.
  - **Refactored High-Concurrency Consumer Service:** Redesigned consumer services using a bounded worker pool model with tuned concurrency limits, eliminating unbounded goroutine growth and improving throughput by **50%** to handle **20K+** messages/sec under burst traffic.
  - **Live Insights & Notifications:** Contributed to live performance-insight and notification features within Prism, surfacing timely campaign alerts that helped marketing teams act on campaign issues **3x** faster.
  - **Cross-Functional Ownership & Mentorship:** Mentored **3** engineers on best practices and code quality, reducing PR review turnaround by **50%**, while owning features from LLD/HLD design through building extensible, reliable systems.
- **LambdaTest** Noida, India  
Software Engineer **Jul 2022 - Sep 2024**
  - **Centralized Inventory Microservice Consolidation:** Led the consolidation of distributed inventory services into a single microservice, reducing user launch time by **45%** and eliminating device unavailability through tighter state consistency and service orchestration.
  - **Streamlined Device Onboarding Pipeline:** Established a self-service device integration workflow, replacing manual DB entries and reducing deployment cycle time from **1 week to 1 day (85% improvement)**.
  - **Enterprise AI Solutions & Integrations:** Designed and delivered an AI-powered accessibility platform, translating enterprise client requirements into scalable integrations across **15+** services; built proof-of-concepts and workflow automations that reduced manual compliance effort by **60%**.
  - **Micro-Frontend Design & Web Performance:** Built a micro-frontend structure to decouple independently deployable UI modules, reducing page load time by **40%** and improving performance scores; delivered business-critical features across **5+** internal teams, cutting cross-team release cycles by **30%**.

## PROJECTS

---

- **Self-Healing On-Call Agent**  
Agentic AI / SRE System **Claude Agent SDK, LangChain, Prometheus, Docker, AI Deployment**
  - **Agentic Triage & Root-Cause Investigation:** Engineered a multi-step reasoning agent using the **Claude Agent SDK** that correlates live Prometheus alerts with logs, traces, and deploy history via custom **MCP** tool servers, cutting manual triage by **70%**.
  - **Tool-Call Design & Guarded Auto-Remediation:** Implemented a propose-approve-execute loop for known failure patterns (restart, scale, rollback) with full action logging and human approval gating, feeding outcomes back into a self-improving runbook store.

## ACHIEVEMENTS

---

- **Google Kick Start:** Ranked **566th** globally among **10,000+** competitive programmers.

## EDUCATION

---

- **Institute of Engineering and Technology** Lucknow, India  
B.Tech in Computer Science with a Minor in **Artificial Intelligence** **GPA: 9.0**
